

Did you ever ask yourself, where you will live when you are old? You probably have images of care homes in your mind right away. And most likely you feel slightly uneasy about that. Most people feel the same and would prefer to stay in their own home as long as possible.

CARU is a young Zurich based company. We ensure safety and wellbeing in living environments. Our smart IoT system enables care takers and patients to connect more efficiently – both in emergencies and in every day live. In turn, we empower people to live independently.

We are looking for an

## Intern in data analysis (min. 50%)

### Your work

- Work with our business development team in the analysis of data gathered in internal and field tests
- Compile reports for customers with individualized data analysis
- Work with our SW development team on the CARU algorithms

### Requirements

- Currently pursuing a Bachelor's, Master's in Computer Science, Electrical Engineering or related technical field
- Fundamentals in software development and implementation in Python
- Fundamentals of data analysis
- Min. availability 6 months
- Swiss working permit

Our highly motivated team has many years of experience in setting up startups and developing consumer products. As a team member you will take responsibilities in your field early on and you will get the great opportunity to shape CARU with your own initiatives.

Are you excited about working in an extremely dynamic environment? Would you like to work in a large emerging international market? Are you passionate about innovative solutions? Then we look forward to receiving your electronic application!
